

Whitepaper

Learn more about CapybaraCoin. whitepaper contains comprehensive information about buying a token and making a profit. You will also find there about tokenomics and plans for the further development of the project.

Get started

\$CPBC CapybaraCoin is a token built on the Binance Smart Chain. It is a meme coin that is designed to be used as a medium of exchange and investment. The goal of the team is to convert the CPBC coin from a meme coin to a real, useful token with various use cases.

Tokenomics

Max Wallet

As an anti-dumping mechanism to prevent significant price manipulation by whales, we capped all wallets at 5%. The only exceptions are reserve, airdrop and burning accounts.

Total Supply & Deflation

The initial total supply is 1,000,000 CPBC tokens. No LP tokens burned or locked, they will be used as a deflation mechanism according to the following system: in case of a dangerous depreciation, % of liquidity is withdrawn, from the withdrawn tokens, the CPBC is burned, and its pair goes to purchase the CPBC. the tokens received as a result of the purchase can be used for an airdrop or transferred to a reserve account.

Minting

Minting of new tokens can be done to eliminate the shortage of supply. In other cases, minting is done to create amount of tokens that can be given to community in airdrops.

Low liquidity

The \$CPBC coin is a new cryptocurrency that offers low liquidity to maximize profit for its community. We believe that this will have a positive impact on the growth dynamics of the coin. By providing low liquidity, we are able to encourage more people to invest in the coin and help to grow the community.

Future of the project

Capybaracoin is a platform that will provide a quick start for new projects, making decentralized finance more accessible. The platform will provide a variety of services for users, including project analysis for investors, simplified procedures for creating project infrastructure, technical issues, team recruitment and organization, and project promotion and financing.

The main focus of the platform is on small projects, with single developers or small teams. It is a great opportunity for one person's idea to have a huge impact on the cryptocurrency world.

The platform will also offer an easy-to-use tools, allowing developers to manage their projects and for investors to looking for new opportunities to invest in young projects.

These tools will include analysis to help investors make informed decisions, a secure wallet, and a system to help keep track of the progress of a project. These tools will help users stay on top of their projects, and ensure that all of the information is up to date and accurate.

The project also has a reward system that encourages people to participate in the development of young projects. It will also allow you to create tasks and activities for which users will be able to get Airdrop. This reward system will act as an incentive for users to participate in the platform, helping to encourage the growth and development of the project.

By providing a platform to help users create and manage their projects, Capybaracoin will help bridge the gap between big and little projects. This will help open the door for new ideas to be explored.

The first working version of the Capybaracoin platform is scheduled to be launched in 2024. In Advance of this, a sandbox version will be released, enabling users to try out the main functions of the service without using their finances. The sandbox version will have all the features of the full version, so users will have the opportunity to get a feel for the platform and how it works. This will help users become familiar with the platform before they start using it.
